Animal Experimentation

The unit is intended to be a complement to the research process by providing technical quality, research experience, ethics and proper management of the different experimental models as required. All this with adherence to international standards of quality (FELASA, AAALAC), in the management of experimental animals, as well as personnel trained in the care of experimental models in each of the work areas. Our aim is to facilitate the procedures and above all improving the quality in each experiment to be performed on this unit.

This unit is designed to operate in safety BSL levels 1 and 2 as the team which will be counted as an individual controlled air system and high safety standards air to generate appropriate containment and biosafety projects, flexibility species to work including fish (zebra fish), small mammals (mini pig) and others. This unit is known for its features like an Animal Facility.
