Virtual Environments for Health Education

Services:

Virtual Environments for Health Education

Description:

Design, implementation and evaluation of forms of communication which use the the Internet, social networks, online platforms, text messaging and blogs with the purpose of providing health education. The target audience are health care providers of public and private organizations that provide health education and academic institutions interested in the research of the use of Technologies of Information and Communication for health promotion. Virtual environments may connect users and health care providers of organizations or communities to provide information or services that promote health to individuals and groups, enable greater collaboration with users and health providers to create networks and to promote the development of new content and services that promote health.

Responsible (Name, position):

Coordinator of Nursing Unit: Raquel Alicia Benavides Torres, PhD.
